PO Box 163, 517 AUBURN AVENUE, SWEDESBORO, NJ 08085, 1-800-541-4657

## *Solid State Tach Generator, Model SSTG-12*

### DESCRIPTION:

The SSTG-12 is a solid state device designed to replace the mechanical tach generator currently in use on your inkometer models MBC, E-101, & E-106. Unlike the existing tach generator, the SSTG-12 has no mechanical parts to wear out and will provide years of reliable operation.

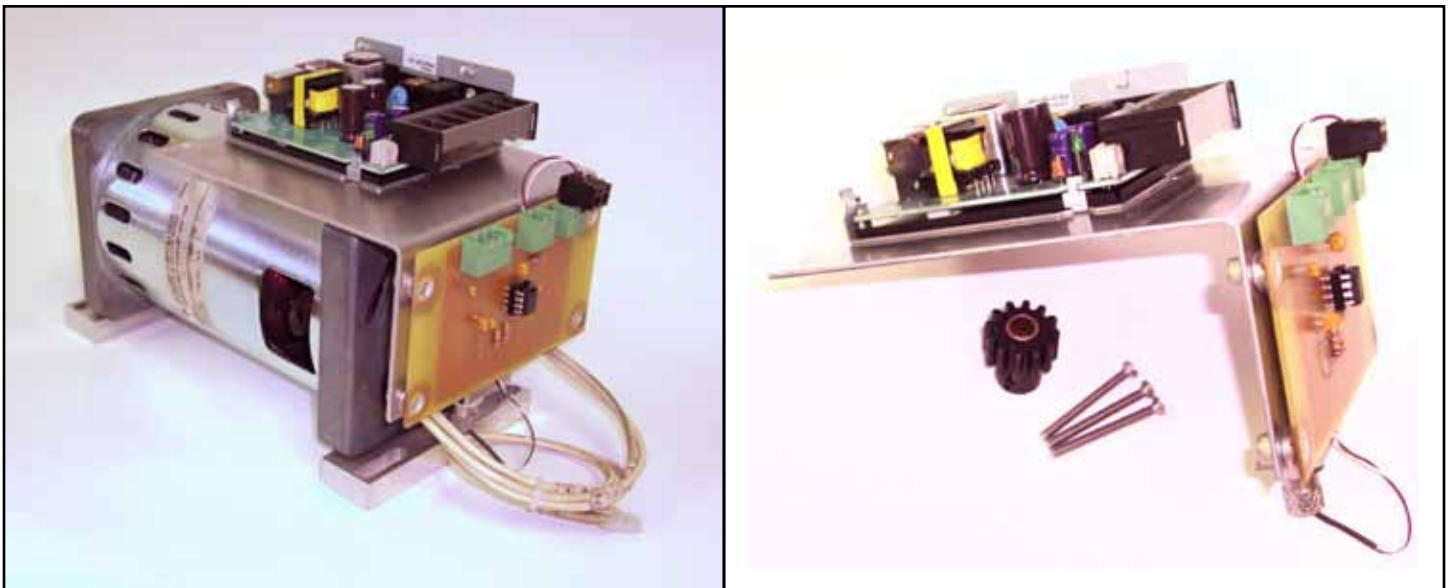

### OPERATION:

The SSTG-12 consists of several components that are all mounted on a single chassis. This chassis mounts directly on the motor (as shown below) using the existing holes from the tach generator. This assembly is sold as the SSTG-12 only or as a complete motor assembly as shown in the photos below. Complete installation instructions are included.

### ORDERING INFORMATION:

Part# E-96: SSTG-12, Tach Generator replacement kit

Part# E-97: SSTG-12, Tach Generator replacement kit  
E-14, Rebuilt motor.
